# **UPPER FLINT REGION**

### **BACKGROUND**

The Upper Flint Regional Water Plan was first adopted in 2011, and a revised plan was adopted in 2017. The Plan is the product of the work of the Upper Flint Regional Water Planning Council. The Regional Water Plan outlines strategies to meet water needs through 2050 and fulfill the Council's vision and goals for the water planning region. Major water resources in the water planning region include the Flint River Basin and the Cretaceous, Clayton, Claiborne, and Upper Floridan Aquifers.

# **SUMMARY OF RESOURCE ASSESSMENT RESULTS**

GROUNDWATER AVAILABILITY: Groundwater use (current and future) is below the sustainable yield range estimated by the resource assessment model for the Clairborne Aquifer and the Upper Floridan Aquifer in South-Central Georgia. Groundwater use is within the estimated sustainable yield range for the Cretaceous Aquifer in the Upper Flint Water Planning Region and above the estimated sustainable yield range for the Upper Floridan Aquifer in the Dougherty Plain. Aquifer use above the estimated sustainable yield range does not necessarily mean the aquifer is likely to be exhausted by use; management practices may be needed to meet long-term demands.

SURFACE WATER AVAILABILITY: The resource assessment model identified potential gaps (current and future) in surface water availability in the Flint River Basin at Bainbridge.

SURFACE WATER QUALITY: Water quality model results indicated decreasing availability of assimilative capacity for dissolved oxygen in some areas of the Flint River Basin as treated wastewater discharges increase in the future. In other areas, expected improvements in wastewater treatment are projected to improve available assimilative capacity under future conditions.

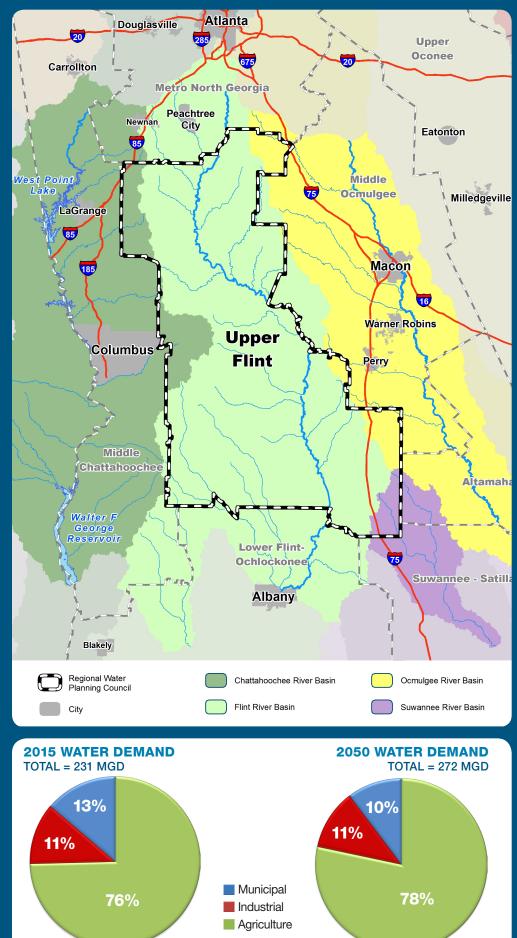

# KEY WATER RESOURCE ISSUES ADDRESSED BY THE COUNCIL IN THE 2017 PLAN

- Water demand and supply management to address potential gaps in water availability
- 2. Improvement to the agricultural water withdrawal metering program
- Targeted water quality concerns and increasing public education about water quality
- 4. Coordination with neighboring water planning councils

### **KEY WATER FEATURES OF THE UPPER FLINT REGION**

## MANAGEMENT PRACTICES AND RECOMMENDATIONS SUMMARY

The Plan outlines management practices and recommendations to address potential gaps in water availability and water quality and to fulfill the Council's vision and goals. The high priority management practices are listed below (see Plan for a detailed description of all management practices and recommendations).

#### **DEMAND MANAGEMENT**

Continue to improve the agricultural water withdrawal metering program.

# SUPPLY MANAGEMENT AND FLOW AUGMENTATION

Evaluate storage options in the Upper Flint that can provide for supply and flow augmentation in dry periods.

#### **WATER QUALITY**

Increase education directed toward improving water quality.

#### **INFORMATION NEEDS**

The Plan identifies information needs to improve regional water planning and recommends that the state develop additional information to support future water plan updates (see the Plan for more details).

# WATER POLICY RECOMMENDATIONS

The Plan makes several recommendations regarding policies and programs to support plan implementation. The Plan also includes joint recommendations that the Council developed with neighboring regional water planning councils to address shared resources and concerns (see the Plan for more details).
